

BACK DRAFT DAMPER

Application

Back Draft Damper are designed in only one direction air flow and to be closed automatically by gravity when fan is not operated. By utilizing this type of construction features that were at one time “Optional Extras” now become standard features without adding to the cost of the air control.

Technical Information

These Back Draft Damper consist of simple face Horizontal blades, the blades will automatically open when there is pressure from the air flow and will automatically close by gravity if there is no air flow.

Construction

Frame : High Quality Extruded Aluminium.
Core : High Quality Sheet Aluminium.
