

MODUL

AIR DISTRIBUTION EQUIPMENT

RETURN AIR GRILLE

Application

Single deflection universal grilles used for intake in air conditioning system, with adjustable front blades, installation can be into walls and ceiling. Throw range is defined by the horizontal distance perpendicular to the register face, at which the air stream velocities have dropped to the terminal velocity.

Technical Information

These grilles have single deflection adjustable blades, Horizontal Return Air Grille consists of face Horizontal Blades and for Vertical Return Air Grille consists of Face Vertical Blades.

Construction

Frame : High Quality extruded aluminium with standard finish natural anodized.

Blades : High Quality extruded aluminium with standard finish natural anodized.
